

DoD SPACE PLANNING CRITERIA

CHAPTER 301: PRIMARY CARE / FAMILY MEDICINE JUNE 1, 2016

Originating Component: Defense Health Agency Facilities Division

Effective: June 1, 2016

Releasability: No Restrictions

Purpose: This issuance: To provide space planning criteria guidance in support of planning, programming and budgeting for DoD Military Health System (MHS) facilities.

SUMMARY of CHANGE

This revision, dated June 1, 2016 includes the following:

- On page 5, SECTION 2: OPERATING RATIONALE AND BASIS OF CRITERIA, paragraph 2.1.D, changed to read “Calculation of the number and -in some cases- the area (NSF) of rooms is performed in one of the following methods:
 1. Directly workload-driven. The directly workload-driven rooms are based on workload projections entered in response to the Workload Input Data Statements (IDSs) included in Section 3. The directly workload driven rooms in this chapter are the total number of Exam Rooms, including General Exam Rooms, Airborne Infection Isolation (AII) Exam Rooms, and Bariatric Exam Rooms.
 2. Indirectly workload-driven. The indirectly workload-driven rooms are derived from the preceding group. They are typically in the Reception and Support Functional Areas. Examples are Waiting, or the number of clean or soiled utility rooms.
 3. Mission or Staffing-driven. The mission / staffing-driven rooms are created based on Boolean ‘yes/no’ or numeric responses to the Mission and Staffing Input Data Statements (IDSs).”
- On page 10, section 4.3. FA3: EXAM PATIENT AREA, room 4, Exam Room, General (EXRG1), changed the criteria statement to read” Minimum two; provide an additional one per each Exam Room calculated (refer to FA 1) greater than four; deduct the number of Airborne Infection Isolation (AII) Exam, Bariatric Exam and Telehealth Exam rooms from the total number of workload driven Exam Rooms.”

SECTION 1: PURPOSE AND SCOPE

1.1.

This chapter outlines space planning criteria for services and programs provided in outpatient Primary Care / Family Medicine Clinics within the Military Health System (MHS). These outpatient clinics include freestanding community-based facilities, as well as ambulatory clinics in or directly adjacent to hospital-based services.

The minimum sized Primary Care / Family Medicine Clinic will include the following four exam rooms:

- A. Two General Exam Rooms
- B. One Airborne Infection Isolation (AII) Exam Room
- C. One Bariatric Exam Room

Spaces in this chapter support the Patient Centered Medical Home (PCMH) model of patient care. The PCMH model has been implemented across the Services, and it is applicable to Primary Care settings such as Family Medicine, Internal Medicine and Pediatrics. If a separate Pediatrics Clinic is planned, the planner must refer to Chapter 303, Pediatrics Clinic.

As part of the PCMH model of care, Behavioral Health Services are embedded into this clinic. The Behavioral Health Provider meets the mental health needs of the enrolled population as part of improving their overall health. The main goal is to provide early recognition, treatment, and management of psychosocial/behavioral problems and conditions.

- B. OPOD 11-20 (Army Patient-Centered Medical Home) – USAMEDCOM, January 2011.
- C. BUMED Instruction 6300.19: Primary Care Services in Navy Medicine, 26 May 2010.
- D. Air Force Instruction 44-171: Patient Centered Medical Home and Family Health Operations, 18 Jan 2011.

The space planning criteria in this chapter apply to all Military Treatment Facilities (MTFs) and are based on current DoD policies and directives, established and/or anticipated best practices, industry guidelines and standards, and input from DoD Subject Matter Experts (SME) and Defense Health Agency (DHA) Service contacts. As directed by the DHA, these space criteria are primarily workload driven; additional drivers are staffing and mission. Room Codes (RCs) in this document are based on the latest version of DoD UFC 4-510-01, Appendix B.

SECTION 2: OPERATING RATIONALE AND BASIS OF CRITERIA

2.1.

A. Workload projections and planned services / modalities for a specific MHS facility project shall be sought by the planner in order to develop a project based on these Criteria. Healthcare and clinical planners working on military hospitals, medical centers and clinics shall utilize and apply the workload based criteria set forth herein for identified services and modalities to determine space requirements for the project.

B. Space planning criteria have been developed on the basis of an understanding of the activities involved in the functional areas required for Primary Care / Family Medicine (PC / FM) and its relationship with other services of a medical facility. These criteria are predicated on established and/or anticipated best practice standards, as adapted to provide environments supporting the highest quality health care for Service Members and their dependents.

C. These criteria are subject to modification relative to equipment, medical practice, vendor requirements, and subsequent planning and design. The final selection of the size and type of medical equipment is determined during the design process.

D. Calculation of the number and -in some cases- the area (NSF) of rooms is performed in one of the following methods:

1. Directly workload-driven. The directly workload-driven rooms are based on workload projections entered in response to the Workload Input Data Statements (IDSs) included in Section 3. The directly workload driven rooms in this chapter are the total number of Exam Rooms, including General Exam Rooms, Airborne Infection Isolation (AII) Exam Rooms, and Bariatric Exam Rooms.
2. Indirectly workload-driven. The indirectly workload-driven rooms are derived from the preceding group. They are typically in the Reception and Support Functional Areas. Examples are Waiting, or the number of clean or soiled utility rooms.
3. Mission or Staffing-driven. The mission / staffing-driven rooms are created based on Boolean 'yes/no' or numeric responses to the Mission and Staffing Input Data Statements (IDSs).E. The Net Square Feet (NSF) and Room Code (RC) for each room in Section 4: Space Planning Criteria of this chapter was provided by or approved by the Defense Health Agency (DHA) Template Board.

F. Section 3: Input Data Statements and Section 4: Space Planning Criteria have been implemented and tested in the Space and Equipment Planning System (SEPS). To gain access to SEPS planner should contact a Defense Health Agency (DHA) representative; access to SEPS is provided via a 16-hour hands-on training session.

G. Calculation of each of the directly workload-driven room types is implemented in SEPS based on the following formulae:

Formula 1: Annual Room Workload Capacity

$$\frac{(\text{Operating Days per year})(\text{Hours of Operation per Day})}{\frac{\text{Average Length of Encounter (ALOE) in Minutes}}{60 \text{ Minutes}}}$$

Where:

1. Operating Days per Year is a user provided value: Range 232 – 251 days.
SEPS default: 240 days
2. Hours of Operation per Day is user provided value: Range 6 – 10 hours.
SEPS default: 8 hours
3. Average Length of Encounter (ALOE) is a user provided value: Range 30 – 45 minutes.
SEPS default: 40 minutes

Formula 2: Project-Based Annual Room Workload Capacity:

$$(\text{Annual Room Workload Capacity})(\text{Utilization Factor})$$

Where:

1. Utilization Factor: 80% if GME is not authorized; 70% if GME is authorized.

Typically, a workload value 20% above the Project-based Annual Room Workload Capacity generates an additional Room.

Formula 3: Number of directly workload-driven rooms:

$$\frac{(\text{Number of Projected Annual Encounters})}{(\text{Project based Annual Workload Capacity})}$$

Example: Calculation the number of PC / FM Exam Rooms based on the following parameters:

1. Operating Days per Year: 240
2. Hours of Operation per Day: 8
3. Average Length of Encounter: 40 minutes
4. Utilization Factor: 80%
5. Projected workload: 68,750 annual PC / FM Exam Rooms encounters

Step 1: PC / FM Exam Rooms Workload Capacity calculation.

$$\frac{(240)(8)}{\frac{40}{60}} = 2,880 \text{ Encounters}$$

Step 2: Project-based PC / FM Exam Rooms Workload Capacity calculation.

$$(2,880)(0.80) = 2,304 \text{ Encounters}$$

Step 3: Number of PC / FM Exam Rooms.

$$\frac{68,780}{2,304} = 30 \text{ PC FM Exam Rooms}$$

SECTION 3: PROGRAM DATA REQUIRED

3.1. INPUT DATA STATEMENTS. Input Data Statements are based on questions about Workload (W), Mission (M), Staffing (S) and Miscellaneous (Misc) information.

1. How many annual Primary Care / Family Medicine encounters are projected? (W)
 - a. How many days per year is Primary Care / Family Medicine authorized to operate? (Range 232 to 251; SEPS default 240) (Misc)
 - b. How many hours a day is Primary Care / Family Medicine Clinic authorized to operate? (Range 6 to 10; SEPS default 8 hours) (Misc)
 - c. What is the Primary Care / Family Medicine Average Length of Encounter (ALOE) in minutes? (Range 30 to 45 minutes; SEPS default: 40) (Misc)
2. How many Airborne Infection Isolation (AII) Exam Rooms, greater than one, are authorized by the MTFs ICRA? (Misc)
3. Is a Bariatric Exam Room for the Primary Care / Family Medicine Exam Patient Area authorized? (Misc)
4. How many Telehealth Rooms, greater than one, are authorized? (Misc)
5. Is a Referral Appointments Office for the Patient Exam Area authorized? (M)
6. Is an Immunization Room authorized for the Primary Care / Family Medicine Patient Treatment Area.(M)
7. Is an EKG Room for the Primary Care / Family Medicine Patient Treatment Area authorized? (M).
8. Is a Phlebotomy Station for the Primary Care / Family Medicine Clinic Patient Treatment Area authorized? (M)
9. Is a Single-Person Audiometric Booth for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)
10. Is a Multi-Person Audiometric Booth for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)
11. Is Vision Screening for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)

12. Is a Cast Room for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)
13. Is a Point of Care Laboratory for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)
14. Is a General Radiographic Room for the Primary Care / Family Medicine Patient Treatment Area authorized? (M)
15. How many Primary Care / Family Medicine FTE positions are authorized? (S)
 - a. How many Primary Care / Family Medicine FTE positions are authorized to have a private office in the Primary Care / Family Medicine Staff and Administration? (Misc)
 - b. How many Primary Care / Family Medicine FTE positions are authorized to have a shared office in the Primary Care / Family Medicine Staff and Administration? (Misc)
 - c. How many Primary Care / Family Medicine FTE positions are authorized to have a cubicle in the Primary Care / Family Medicine Staff and Administration? (Misc)
 - d. How many Primary Care / Family Medicine FTEs will work on peak shift? (Misc)
 - e. How many embedded Behavioral Health provider FTE positions are authorized? (S)
16. Is a Patient Records Storage for the Primary Care / Family Medicine Staff and Administration authorized? (M)
17. Is a Family Practice Graduate Medical Education (GME) Program authorized? (M) (If yes, Utilization Factor: 70%; if no, Utilization Factor: 80%) (M)
 - a. Is a Family Practice Graduate Medical Education Residency Coordinator authorized? (Misc)
 - b. How many Resident FTE positions are authorized for the Primary Care / Family Medicine GME Education / Training program? (S)

3.2. COMPUTED

1. Step 1: Primary Care / Family Medicine Annual Room Workload Capacity (Computer Calculated value; user input not applicable).
2. Step 2A: Primary Care / Family Medicine Clinic Project-Based Annual Room Workload Capacity without GME Program authorized (80% of Step 1) (Computer calculated value, user input not applicable).
3. Step 2B: Primary Care / Family Medicine Clinic Project-Based Annual Room Workload Capacity with GME Program authorized (70% of Step 1) (Computer calculated value, user input not applicable).
4. Total number of FTE positions not assigned a private office, a shared office or a cubicle. (Computed, no user input needed).

SECTION 4: SPACE PLANNING CRITERIA

For calculation of the number of Vending Machine areas, Public Toilets, Communication Closets, and Janitor Closets for this Chapter, please refer to DoD Space Planning Criteria Chapter 610: Common Areas.

4.1. FA1: EXAM ROOM CALCULATION

1. **Number of Exam Rooms (CALC1)** **0 NSF**
Refer to Formulas 1 & 2 in Section 2: Operating Rationale and Basis of Criteria.

4.2. FA2: RECEPTION

1. **Waiting (WRC01)** **120 NSF**
Minimum NSF; provide an additional 60 NSF for every increment of two Exam Rooms, of all types, greater than four.
2. **Playroom (PLAY1)** **120 NSF**
Provide one for the Primary Care / Family Medicine Reception.

This space is provided to accommodate children's play activities, maybe an open or an enclosed area, and should be included within or adjacent to Waiting.
3. **Kiosk, Patient Check-In (CLSC1)** **30 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
4. **Reception (RECP1)** **120 NSF**
Minimum NSF; provide an additional 60 NSF for every increment of sixteen Exam Rooms, of all types, greater than sixteen.

Minimum allocated NSF accommodates two FTEs.
5. **Patient Education (CLSC3)** **120 NSF**
Minimum NSF; provide an additional 120 NSF for every increment of sixteen Exam Rooms, of all types, greater than sixteen.

4.3. FA3: EXAM PATIENT AREA

1. **Alcove, Height / Weight (EXR11)** **30 NSF**
Minimum one; provide an additional one for every increment of eight Exam Rooms, of all types, greater than eight.
2. **Screening (EXRG4)** **120 NSF**
Minimum one, provide an additional one for every increment of eight Exam Rooms, of all types, greater than eight.

3. **Office, Referral Appointments (OFA04)** **120 NSF**
Provide one if a Referral Appointments Office for the Patient Exam Area is authorized.

4. **Exam Room, General (EXRG1)** **120 NSF**
Minimum two; provide an additional one per each Exam Room calculated (refer to FA 1) greater than four; deduct the number of Airborne Infection Isolation (AII) Exam, Bariatric Exam and Telehealth Exam rooms from the total number of workload driven Exam Rooms.

5. **Exam Room, Airborne Infection Isolation (AII) (EXRG6)** **180 NSF**
Minimum one; provide an additional one per each Airborne Infection Isolation (AII) Exam Room, greater than one, authorized by the ICRA.

The number, location and type of Airborne Infection Isolation (AII) Exam Rooms shall be determined by the Infection Control Risk Assessment (ICRA), which shall be conducted during the early planning phase of the project. This room is part of the total number of workload driven exam rooms.

6. **Toilet, Airborne Infection Isolation (AII) Patient (TLTU1)** **60 NSF**
Provide one per each Airborne Infection Isolation (AII) Exam Room.

7. **Exam Room, Bariatric (EXB01)** **150 NSF**
Provide one if a Bariatric Exam Room for the Primary Care / Family Medicine Exam Patient Area is authorized.

This room is part of the total number of workload driven exam rooms.

8. **Toilet, Bariatric (TLTB1)** **75 NSF**
Provide one if a Bariatric Exam Room for the Primary Care / Family Medicine Exam Patient Area is authorized.

9. **Office, Behavioral Health Provider (OFDC1)** **120 NSF**
Provide one for each embedded Behavioral Health provider FTE position authorized.

At least one full time Behavioral Health provider, following the PCBH model, will deliver services within Primary Care / Family Medicine.

10. **Exam / Consult (EXR10)** **120 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.

11. **Toilet, Patient (TLTU1)** **60 NSF**
Minimum one; provide an additional one for every increment of eight General Exam, and Exam/Consult Rooms greater than eight.

12. **Telehealth Room (EXTH1)** **120 NSF**
Minimum one; provide an additional one per each Telehealth Room, greater than one, authorized.

This room is part of the total number of workload driven exam rooms.

13. **Lactation Room (LAC01)** **120 NSF**
Provide one for the Primary Care / Family Medicine Exam Patient Area

4.4. FA4: TREATMENT PATIENT AREA

1. **Waiting, Immunization / Observation (WRC01)** **120 NSF**
Provide one if an Immunization Room is authorized for the Primary Care / Family Medicine Patient Treatment Area.
2. **Immunization (OPIR1)** **240 NSF**
Provide one, if an Immunization Room is authorized for the Primary Care / Family Medicine Patient Treatment Area.
3. **Treatment Room, General (TRGM1)** **180 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
4. **Toilet, Patient (TLTU1)** **60 NSF**
Provide one for the Primary Care / Family Medicine Patient Treatment Area.
5. **Observation / Hydration (OOHR1)** **120 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
6. **EKG Room (OPEC1)** **120 NSF**
Provide one for the Primary Care / Family Medicine Patient Treatment Area if an EKG Room is authorized.
7. **Audiometric Booth, Single-Person (PEHS1)** **120 NSF**
Provide one if a Single-Person Audiometric Booth for the Primary Care / Family Medicine Patient Treatment Area is authorized.
8. **Audiometric Booth, Multi-Person (PEHS2)** **360 NSF**
Provide one if a Multi-Person Audiometric Booth for the Primary Care / Family Medicine Patient Treatment Area is authorized.
9. **Vision Screening (PEVS1)** **120 NSF**
Provide one if Vision Screening for the Primary Care / Family Medicine Patient Treatment Area is authorized.

10. **Cast Room (OPCR1)** **180 NSF**
Provide one if a Cast Room for the Primary Care / Family Medicine Patient Treatment Area is authorized.
11. **Laboratory, Point of Care (LBSP1)** **120 NSF**
Provide one if a Point of Care Laboratory for the Primary Care / Family Medicine Patient Treatment Area is authorized.
12. **Toilet, Specimen Collection (TLTU1)** **60 NSF**
Provide one if a Point of Care Laboratory for the Primary Care / Family Medicine Patient Treatment Area is authorized.
13. **Phlebotomy Station (LBVP1)** **120 NSF**
Provide one if a Phlebotomy Station for the Primary Care / Family Medicine Patient Treatment Area is authorized.
14. **Storage, Point of Care Laboratory (SRS01)** **60 NSF**
Provide one if a Point of Care Laboratory for the Primary Care / Family Medicine Patient Treatment Area is authorized.
15. **General Radiographic Room (XDR01)** **300 NSF**
Provide one if a General Radiographic Room for the Primary Care / Family Medicine Patient Treatment Area is authorized.
16. **Cubicle, Patient Dressing (DR001)** **60 NSF**
Provide one if a General Radiographic Room for the Primary Care / Family Medicine Patient Treatment Area is authorized.
17. **Viewing Room, Picture Archiving and Communication System (PACS) (XVC01)** **120 NSF**
Provide one if a General Radiographic Room for the Primary Care / Family Medicine Patient Treatment Area is authorized.

4.5. FA5: SUPPORT

1. **Medication Room (MEDP1)** **120 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
2. **Storage, Equipment (SRE01)** **120 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
3. **Utility Room, Clean (UCCL1)** **120 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.

4. **Utility Room, Soiled (USCL1)** **90 NSF**
Minimum one; provide an additional one for every increment of sixteen Exam Rooms, of all types, greater than sixteen.
5. **Alcove, Wheelchair (SRLW1)** **30 NSF**
Provide one for PC/FM clinic.
6. **Alcove, Crash Cart (RCA01)** **30 NSF**
Provide one for PC/FM clinic.

4.6. FA6: STAFF AND ADMINISTRATION

1. **Office, Clinic Chief (OFA04)** **120 NSF**
Provide one for the Primary Care / Family Medicine Staff and Administration.
2. **Office, NCOIC / LCPO / LPO (OFA04)** **120 NSF**
Provide one for the Primary Care / Family Medicine Staff and Administration.
3. **Office, Nurse Manager (OFA04)** **120 NSF**
Provide one for the Primary Care / Family Medicine Staff and Administration.
4. **Team Collaboration Room (WRCH1)** **120 NSF**
Minimum one; provide an additional one for every increment of eight Exam Rooms; of any type, greater than eight.
5. **Office, Private (OFA04)** **120 NSF**
Provide one per each FTE position authorized to have a private office in Primary Care / Family Medicine Staff and Administration.
6. **Office, Shared (OFA05)** **120 NSF**
Provide one for every increment of two FTE positions authorized to have a shared office in Primary Care / Family Medicine Staff and Administration.
7. **Cubicle (OFA03)** **60 NSF**
Provide one per each FTE position authorized to have a cubicle in Primary Care / Family Medicine Staff and Administration.

These cubicles may be collocated in a shared space or dispersed as required.
8. **Storage, Patient Records (FILE1)** **120 NSF**
Provide one if a Patient Records Storage is authorized in Primary Care / Family Medicine Staff and Administration.
9. **Conference Room (CRA01)** **240 NSF**
Minimum NSF; provide an additional 60 NSF if the total number of FTE positions authorized is greater than ten.

Planner must determine adequacy and availability of existing Conference Room space and the ability to optimize resources by sharing Conference Room space with other departments.

10. **Copy / Office Supply (RPR01)** **120 NSF**
Minimum NSF; provide an additional 60 NSF for every increment of sixteen Exam Rooms, of all types, greater than sixteen.

11. **Lounge, Staff (SL001)** **120 NSF**
Minimum NSF, if the number of Primary Care / Family Medicine FTEs working on peak shift is ten; provide an additional 60 NSF for every increment of five PC/FM FTEs working on peak shift greater than ten; maximum 360 NSF.

12. **Toilet, Staff (TLTU1)** **60 NSF**
Minimum one; provide an additional one for every increment of fifteen Primary Care / Family Medicine FTEs working on peak shift greater than fifteen.

13. **Lockers, Personal Property (LR001)** **30 NSF**

Minimum NSF; provide an additional 30 NSF for every increment of four PC/FM FTE positions not assigned a private office, a shared office or a cubicle greater than eight.

4.7. FA7: GME EDUCATION / TRAINING

1. **Office, Residency Program Director (OFA04)** **120 NSF**
Provide one if a Family Practice Graduate Medical Education (GME) Program is authorized.

2. **Office, Residency Coordinator (OFA04)** **120 NSF**
Provide one if a Residency Coordinator is authorized and a Family Practice Graduate Medical Education (GME) Program is authorized.

3. **Storage, Residency Records (FILE1)** **60 NSF**
Provide one if a Family Practice Graduate Medical Education (GME) Program is authorized.

4. **Office, Preceptor (OFD01)** **120 NSF**
Provide one if a Family Practice Graduate Medical Education (GME) Program is authorized.

5. **Resident Collaboration Room (WKTM1)** **240 NSF**
Minimum NSF if a PC/FM Graduate Medical Education (GME) is authorized; provide an additional 60 NSF per each Resident / Student FTE position authorized greater than two.

Minimum NSF accommodates two Residents, and a Collaboration / Reference area.

6. **Conference /Classroom (CRA01)** **240 NSF**
Provide one if a Family Practice Graduate Medical Education (GME) Program is authorized and if the number of Resident / Student FTE positions authorized is greater than five.

SECTION 5: PLANNING AND DESIGN CONSIDERATIONS

The following design considerations are intended to provide planners and designers with guidance on how to follow world-class and evidence-based design strategies for new and renovation of existing healthcare facilities. For a more comprehensive list, refer to the World Class Checklist (<https://facilities.health.mil/home/>). Also refer to Part 3: Outpatient Facilities of the FGI Guidelines for Design and Construction of Hospitals and Outpatient Facilities by the Facility Guidelines Institute (FGI Guidelines) for additional information.

5.1. NET-TO-DEPARTMENT GROSS FACTOR.

The net-to-department gross factor (NTDG) for Primary Care / Family Medicine is **1.40**. This number, when multiplied by the programmed net square foot (NSF) area, determines the departmental gross square feet. This factor accounts for the space occupied by internal department circulation and interior partitions as well as other construction elements not defined by the net square foot area. Refer to UFC 4-510-01, Section 2-3.4.2.2 and DoD Space Planning Criteria Chapter 130: Net to Gross Conversion Factors.

5.2. GENERAL DESIGN CONSIDERATIONS.

- a. In the PCMH model of care, there are more members of the primary care team than there are in the traditional model (e.g., Case Managers, Behavioral Health Providers, Clinical Pharmacists, Dietitians, etc.). The key design consideration in supporting the PCMH model is the proximity of the primary care team. Proximity alone facilitates ease of collaboration; treatment planning, consultation and having multiple team members see the patient during the same visit or at the same time. Consideration must be given to co-locating key members of the primary care team within the same area of the clinical space or, if not logistically possible, as close to one another as feasible.
- b. Consideration shall be given to providing pediatric clinic space within the Primary Care / Family Practice clinics when volume of pediatric visits is low.
- c. Consider technology requirements early on in design. Technology can be leveraged for safety and efficiency.
- d. Consider space (temporary or fixed) and IM/IT capabilities for all team members to be able to accomplish their required documentation.

- e. Consider convenient access to both the Outpatient Pharmacy and Lab and Diagnostic and Treatment services as needed.

5.3. RECEPTION

- a. Waiting:
 - 1 Seating should be comfortable with adequate space for patients with wheelchairs and walking aids.
 - 2 Consideration should be given to special needs of specific patient groups in a shared / general waiting area. For example, adolescent and geriatric patients may require different seating options and environments. Consider the needs of bariatric patients.
 - 3 The playroom (or play area) for children shall be constructed of surfaces and materials that are easy to clean and durable (nonporous and smooth).
- b. Locate the Patient Education / Resource Room near the patient care areas for patient convenience and to reduce unnecessary traffic through the clinic.

5.4. PATIENT EXAM AND TREATMENT AREAS

- a. Exam Rooms: No exam room is intended to be dedicated to any specific provider; rather all exam rooms can be used at all times.
- b. Team Collaboration Room: Each PCMH team shall be collocated in a Team Collaboration Room rather than in individual offices. This promotes improved collaboration and coordination of care through increased communication and staff efficiency. Team Collaboration Rooms and staff areas should be located so staff members may have private conversations regarding patients and clinical matters without being heard by patients or visitors.
- c. Observation / Hydration Room may be combined and planned as multi-station rooms during design.
- d. Locate the Immunization / Observation Waiting area in line of sight to the immunization treatment area or to another staff occupied area. This area may be co-located with other waiting areas if the above requirement is met.
- e. Lactation Room: A private area will be provided in the Primary Care / Family Medicine Clinic to accommodate family members and staff who are nursing. Lactation Rooms are also provided in other DoD Space Planning Criteria Chapters, including Chapter 303: Pediatrics Clinic, Chapter 360: Women's Health and Chapter 610: Common Areas.

5.5. SUPPORT

- a. Optimize staff efficiency and performance by providing decentralized support spaces (e.g. charting, supplies, medications and equipment). Keep staff travel distances to a minimum.
- b. In all equipment storage rooms, assure adequate power is provided for all equipment housed within these rooms.

5.6. STAFF AND ADMINISTRATION

- a. The Conference Room may be also used for patient education in smaller facilities. In such case, consider locating it near the Reception Area. Planner must determine adequacy and availability of existing Conference Room space in order to optimize resources with other clinics.
- b. Consider designing the staff lounge as a place of respite, utilizing lighting and technology. (e.g., backlit art; controllable lighting; soft, natural colors; ergonomically supportive furniture; and soft music).

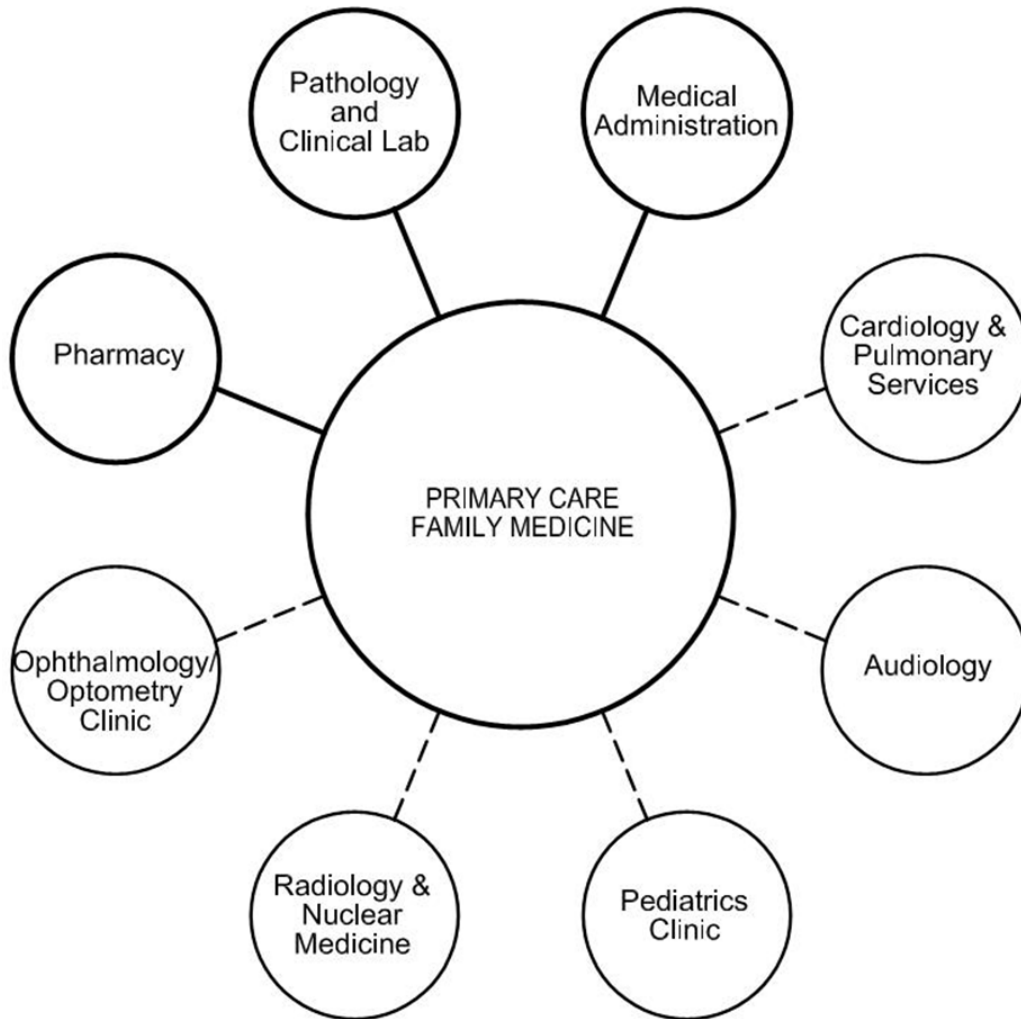

5.7. GME EDUCATION / TRAINING

- a. GME Residents will be provided with shared administrative space. These residents are not necessarily Primary Care / Family Practice Residents; other specialties may require a rotation in this clinic.

SECTION 6: FUNCTIONAL RELATIONSHIPS (INTRADEPARTMENTAL)

6.1.

Primary Care / Family Medicine will rely on a number of other services in a Military Treatment Facility (MTF) for patient care and support functions. The diagram below represents desirable relationships based on efficiency and functional considerations.

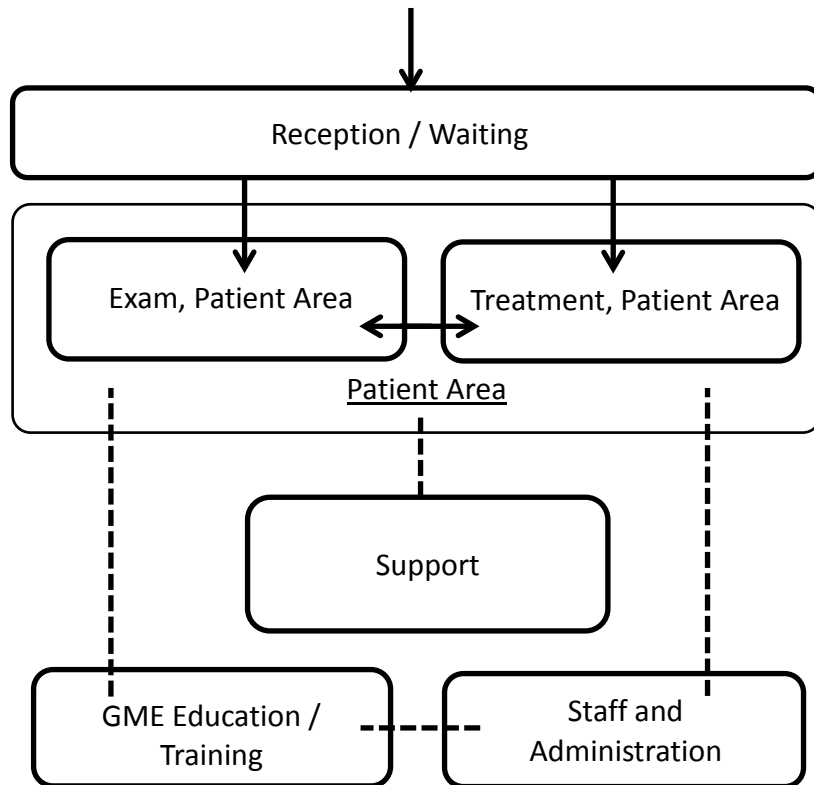

LEGEND

- Most Critical Adjacency
- - - - - Less Critical Adjacency

SECTION 7: FUNCTIONAL DIAGRAM (INTERDEPARTMENTAL)

7.1.

The diagram below illustrates intradepartmental relationships among key areas / spaces within Primary Care / Family Medicine. The diagram is necessarily generic. The planner shall use this as a basis for design only and shall consider project-specific requirements for each Military Treatment Facility.

LEGEND

- > Patient Circulation
- - - - - Staff Circulation

PRIMARY CARE

GLOSSARY

G.1. DEFINITIONS

Airborne Infection Isolation (AII) Room: Formerly called negative pressure isolation room, an AII Room is a single-occupancy patient-care room used to isolate persons with certain suspected or confirmed infections. Examples are tuberculosis, measles, and chicken pox. Environmental factors are controlled in AII Rooms to minimize the transmission of infectious agents that are usually spread from person-to-person by droplet nuclei associated with coughing or aerosolization of contaminated fluids.

Audiometric Booth: This space provides a self-contained environment for hearing conservation programs. Testing booths are offered with a range of acoustical performance levels, variations in floor plans, and numerous options.

Authorized: This document uses the term “authorized” to indicate that, during a project’s space plan development, a planner shall seek approval from the appropriate official in the chain of command to activate certain spaces or certain groups of spaces. Typical components that may require authorization are certain programs or services that activate Functional Areas (e.g., GME); office spaces (e.g., FTE position); specialized rooms (e.g., Hybrid OR) or other spaces (e.g., On-Call Room). Typically, Mission, Staffing and Miscellaneous Input Data Statements require authorization, while directly and indirectly workload driven rooms / spaces do not.

Average Length of Encounter (ALOE): In these space criteria, an encounter is defined as a face-to-face professional contact between a patient and a provider vested with responsibility for diagnosing, evaluating, and treating the patient’s condition. The Length of Encounter is the time between set-up and clean-up of an Exam / Treatment Room. The Average Length of Encounter is used to capture variations in Length of Encounter among similar clinical encounters that will take place in an Exam Room.

Bariatrics: Bariatrics is the branch of medicine that deals with the causes, prevention, and treatment of obesity. A bariatric patient is one that is severely obese, overweight by 100 to 200 lbs., or having a body weight of greater than 300 lbs. A Body Mass Index (BMI) of greater than 40 is considered bariatric.

Bariatric Exam Room: This room is sized and equipped to accommodate the bariatric patient and their family member(s). It is sized for easier access. Minimum door width should be 4’ to accommodate bariatric wheelchairs, and a minimum of a 6’ turning radius should be provided. When provided, these rooms should be located towards the front (entrance) of the clinical suite.

Bariatric Patient Toilet: This space is the bathroom for the bariatric patient. Planner should refer to the FGI Guidelines for the preferred bariatric design solutions for this room. This bathroom should be located proximate to the Bariatric Patient Exam / Treatment Room; however, it is not solely dedicated to the bariatric patient. It may be used by other patients for added flexibility.

Behavioral Health: Behavioral Health refers to a continuum of services for individuals at risk of, or suffering from, mental, behavioral, or addictive (e.g., substance abuse) disorders. Behavioral Health, as a discipline, refers to mental health, psychiatric, marriage and family counseling, addictions treatment, and includes services provided by Behavioral Health Providers (BHPs). Behavioral Health is integrated into PCMH through embedding BHPs to support this effort. Dedicated space must be provided for this service in the Primary Care / Family Medicine Clinic.

Behavioral Health Provider: The Behavioral Health Provider provides behavioral health services. These providers include psychiatrists, psychologists, psychiatric nurse practitioners and social workers.

Clean Utility Room: This room is used for the storage and holding of clean and sterile supplies. Clean linen may be stored in a designated area in the clean utility room if space is not provided in a separate room or in an alcove.

Consult Room: This is a consultation room for family members to meet with physicians or other providers privately and is ideally located near the waiting room.

Cubicle: A cubicle is a partially enclosed workspace, separated from neighboring workspaces by partitions. Managers and other staff with no supervisory responsibilities as well as part-time, seasonal, and job-sharing staff may qualify for a cubicle.

Encounter: A contact between an eligible beneficiary and a credentialed provider. An encounter may consist of examination, diagnosis, treatment, evaluation, consultation or counseling or a combination of the above. The encounter may take place in a clinic, by telephone, computer, or in other treatment or observation areas. Encounter volume used to generate exam room requirements should not include telephone encounters.

Exam/Consult Room: This room is intended to support one on one consults with a staff member and patient; it is outfitted with comfortable chairs, but it is also equipped with a sink or capped plumbing to facilitate easy conversion to an exam room. This room is located in the patient care zone, proximate to the exam rooms and not in the public zone or waiting room.

Full-Time Equivalent (FTE): A staffing parameter equal to the amount of time assigned to one full time employee. It may be composed of several part-time employees whose total time commitment equals that of a full-time employee. One FTE equals a 40-hour per week workload. The FTE measure may also be used for specific workload staffing parameters such as a clinical FTE; the amount of time assigned to an employee providing clinical care. For example, a 0.5 clinical FTE for a healthcare worker would indicate that the healthcare worker provides clinical care half of the time per a 40-hour work week.

Functional Area (FA): The grouping of rooms and spaces based on their function within a service. Typical Functional Areas in clinical services are Reception, Patient Area, Support, Staff and Administration, and Education.

General Treatment Room: This room, used for invasive diagnostic and therapeutic treatment of patients, will be stretcher and wheelchair accessible, accommodate sterile technique, and comfortably fit 1-2 providers, an assistant, and the patient.

Graduate Medical Education (GME): After a physician completes 4 years of medical school, they must then complete an internship (also called PGY1 or Post Graduate Year 1) and then a residency (also termed GME or Graduate Medical Education). An internship typically lasts one year, and a residency can last from three to seven years depending on the specialty that is chosen.

Hours of Operation per Day: These are the hours of operation within a department. For example, a hospital nursing unit and an emergency department will operate 24 hours per day; whereas a clinic may be operational 8 hours or more, depending on the clinic.

Immunization Room: This is the location where patients receive their allergy and immunization injections.

Immunization / Observation Waiting: A sub waiting area for direct nurse observation of post-immunization patients.

Infection Control Risk Assessment (ICRA): An ICRA is a multidisciplinary, organizational, documented process that considers the medical facility's patient population and mission to reduce the risk of infection based on knowledge about infection, infectious agents, and the care environment, permitting the facility to anticipate potential impact.

Input Data Statement: A set of questions designed to elicit information about the healthcare project in order to create a Program for Design (PFD) (see definition below); based on the space criteria parameters (refer to Section 4) set forth in this document. Input Data Statements are defined as Mission, Workload, Staffing or Miscellaneous.

Laboratory, Point Of Care: A laboratory that is located permanently away from the central laboratory, with one or several analyzers operated by either laboratory or non-laboratory personnel. The objective of creating this laboratory is to provide rapid point-of-care tests and improve turnaround time for critical tests.

Lactation Room: Private space which accommodates an individual for breast feeding. Must include sink, flat surface for breast pumps, trash receptacle and baby change table.

Net-to-Department Gross Factor (NTDG): A parameter used to calculate the Department Gross Square Foot (DGSF) area based on the programmed Net Square Foot (NSF) area. Refer to DoD Chapter 130 for the NTDG factors for all Space Planning Criteria chapters.

Observation / Hydration Room: This is the room where IV hydration and observation takes place. IV hydration is the replacement of necessary fluids via an IV infusion which consists of pre-packaged fluids and electrolytes. IV hydration occurs for more than 30 minutes, and the patient is observed until his/her disposition is determined.

Office, Private: A single occupancy office provided for confidential communication.

Office, Shared: An office that accommodates two workstations.

Operating Days per Year: The number of days per calendar year a facility is operational for patient care (refer to Section 2).

Outpatient Clinic: A clinic providing outpatient service in both freestanding community-based facilities, as well as ambulatory clinics in or directly adjacent to hospital-based services.

Patient-Centered Medical Home (PCMH): PCMH is an established model of primary care that improves continuity of care and enhances access through patient-centered care and effective patient-provider communication. Every Prime patient is assigned a primary care manager by name (PCMBN) and each Primary Care Manager (PCM) is part of a team practice. The PCM team ensures patients have access to advice and provider continuity 24 hours 7 days a week.

Personal Property Lockers: This is a small-sized locker, commonly called purse or cell phone locker, and is generally used to secure purses and smaller valuables. Staff members who do not have an office or cubicle space where they can safely store belongings will be assigned these lockers.

Picture Archiving and Communication System (PACS) Viewing Room: A digital radiology reading room that consists of workstations for interpretation.

Playroom: This space is provided to accommodate children's play activities; it shall be outfitted with appropriate furniture and accessories and included within the General Waiting.

Preceptor Office: A location for residents in training to discuss cases in private with supervising physicians (preceptors). These discussions may occur during patient visits, requiring proximity to exam space.

Program for Design (PFD): A listing of all of the rooms / spaces generated based on answers to the Input Data Statements (see Section 3) and the space planning criteria outlined in this document (Section 4) in SEPS. The list is organized by Functional Area and includes the Room Quantity, Room Code, Room Name and generated Net Square Feet (NSF), Construction Phase and Construction Type.

Project Room Contents (PRC): A listing of the assigned contents (medical equipment, FF&E, etc.) for each room in a PFD generated by SEPS.

Provider: A medical professional, such as a physician, nurse practitioner, or physician assistant, who examines, diagnoses, treats, prescribes medications, and manages the care of patients within the scope of their practice as established by the governing body of a healthcare organization.

Resident Collaboration Room: This room is provided for the Residents. It will contain one cubicle per Resident, a table with chairs for collaboration space and bookcases.

Room Efficiency factor: A factor that provides flexibility in the utilization of a room to account for patient delays, scheduling conflicts, and equipment maintenance. Common factors are in the 80 to 85% range. A room with 80% room efficiency provides a buffer to assume that this room would be available 20% of the time beyond the planned operational practices of the room. This factor may be adjusted based on the actual and/or anticipated operations and processes of the room / department.

Screening Room: After patients are checked in at reception they may proceed to the screening room for weights and vital signs prior to going to an exam room. However, activities such as screening, medical history, vitals, height and weight can also be conducted in the Exam Room. The inclusion of the Screening Room will depend upon the individual facility's model of care. Consideration should be given to models that facilitate gaining healthcare delivery efficiencies and an enhanced patient experience.

Soiled Utility Room: This space provides an area for cleanup of medical equipment and instruments, and for disposal of medical waste material. It provides temporary holding for material that will be picked up by Central Sterile or similar service. It should be readily accessible to staff.

Space and Equipment Planning System (SEPS): A digital tool developed by the Department of Defense (DoD) and the Department of Veterans Affairs to generate a Program for Design (PFD) and a Project Room Contents list (PRC) for a DoD healthcare project based on approved Space Planning Criteria, the chapter and specific project-related Mission, Workload and Staffing information entered in response to the Program Data Required - Input Data Statements (IDSs).

Team Collaboration Room: This space provides staff with an environment conducive to collaboration. Room contains computer workstations for documentation and a table with chairs to hold meetings.

Telehealth: The use of technology, such as computers and mobile devices, to manage healthcare remotely. It includes a variety of health care services, including but not limited to online support groups, online health information and self-management tools, email and online communication with health care providers, remote monitoring of vital signs, video or online doctor visits. Depending on the concept of operations for this space, it may be equipped as an exam room or as a consult room with video / camera capability.

Utilization Factor: Also known as capacity utilization rate, this factor provides flexibility in the utilization of a room to account for patient delays, scheduling conflicts and equipment maintenance. A room with an 80% utilization factor provides a buffer to assume that this room would be available 20% of the time beyond the planned operational practices for this room.

Workload: Space Planning Criteria per DHA Policy shall be workload driven. Workload projections divided by the throughput determined in this document for each workload driven room determines the quantity of rooms needed to satisfy the projected workload demand.
